The x -intercepts or roots of the quadratic in Example 10.6.1 are found by factoring. For this problem, the quadratic factors to $(x - 2)(x + 3)$, which means the roots are $x = 2$ and $x = -3$. Putting all this data together gives us the vertex coordinate $(-0.5, 6.125)$ and the two x -intercept coordinates $(2, 0)$ and $(-3, 0)$. These are the values used to create the rough sketch.
